Computer Instructions

- The basic computer has three instruction code formats.
- Each format has 16 bits.
- The operation code(op-code) part of the instruction contains three bits and the meaning of remaining 13 bits depends upon the op-code encountered.

Basic computer instruction formats.

Instruction Cycle

- The program is executed in the computer by going thru a cycle for each instruction.
- In basic computer, each instruction cycle consists of the following phases:

1. Fetch an instruction from memory.
2. Decode the instruction.
3. Read the effective address from memory.
4. Execute the instruction.

Instruction Cycle

T_0: $AR \leftarrow PC$
T_1: $IR \leftarrow M[AR]$, $PC \leftarrow PC + 1$
T_2: $D_0, \ldots, D_7 \leftarrow$ Decode $IR(12\text{–}14)$, $AR \leftarrow IR(0\text{–}11)$, $I \leftarrow IR(15)$
